Subject: Complete Integration & OAuth Setup Guide " Every Service,
Step-by-Step
Date: Mar 27, 2026 at 5:30:06 PM
To: bryn.kai-hendricks@outlook.com

Hi Bryn,

Attached is the complete integration and OAuth setup guide for self-hosting. This covers EVERY external service your app connects to, with detailed step-by-step instructions.

What's inside:

1. Overview of all 10 integrations and what each one does

2. Tools you'll need (and where to get them)

3. CRITICAL: Replit Connector Rewrites — 4 files that need code changes because they currently use Replit's connector system which won't exist on your Pi

4. Detailed setup for each integration:

- Home Assistant (easy — just a token)
- Google Calendar (OAuth with full token exchange walkthrough)
- Gmail (same Google project, just add scope)
- Spotify (mostly works already, tiny code change)
- Microsoft OneDrive (Azure app registration, full walkthrough)
- Microsoft Outlook (same Azure app, add permissions)
- OpenAI TTS (API key, cost estimate included)
- Resend email (API key)
- Second/Third Google Accounts (small code fix)
- Object Storage (3 options for replacing Replit storage)

5. Complete .env template with every single environment variable

6. Testing commands for each integration

7. ChatGPT prompts for when you get stuck on:

- General OAuth issues
- Token exchange problems
- Expired refresh tokens
- Rewriting Replit connector code

The guide includes exact URLs to visit, exact curl commands to run, exact code to change, and exact error messages you might see.

Best,
Dashboard App
