Hi Bryn,

Attached is a complete troubleshooting guide covering every section of the self-hosting setup, plus ready-to-copy ChatGPT prompts for when you need AI help.

What's inside:

1. A universal ChatGPT "intro statement" you can paste before any question — it explains your entire project so ChatGPT understands the context immediately

2. Section-by-section troubleshooting for:

- Flashing the OS
- SSH and first boot
- Installing Node.js, PostgreSQL, espeak-ng, edge-tts
- Database setup and auth issues
- Transferring code and npm install
- Environment variables
- OAuth setup (Google, Spotify, Microsoft) — the hardest part
- Database initialization with Drizzle
- Building and testing
- systemd service setup
- Home Assistant webhook updates
- Google Apps Script / Cloudflare Tunnel
- Touchscreen setup

3. Feature-specific ChatGPT prompt templates for:

- Calendar issues
- Spotify issues
- Cat washroom / TTS issues (with all correct entity names)
- Weather/ticker issues

4. Quick reference command table for common tasks

Each problem includes: what the error looks like, how to diagnose it, how to fix it, and a copy-paste ChatGPT prompt with blanks to fill in.

Best,
Dashboard App
