RE: Replit Support Ticket #269782

From: Bryn Kai-Hendricks <Bryn.kai-hendricks@outlook.com>
To: Support <support@replit.com>
Date: January 23, 2026 at 12:44 PM EST

I just received an email telling me to activate my support account and when I did it said I'm not authorized. WTF is going on here? Your agent said "I apologize that my earlier advice led to this situation. Replit support should be able to resolve it quickly since it's a database configuration issue on their end."

I've sent you several emails over the last couple of day, I'm getting charged like crazy for the mistakes your agent is making and it isn't fair and now it screwed up my entire app and I can't publish.

From: Mark (Replit Engineering) (Support) <support@replit.com>
Sent: January 23, 2026 12:41 PM
To: Bryn <bryn.kai-hendricks@outlook.com>
Subject: Replit Support Ticket #269782

Hello from Replit,

Thank you for reaching out to our support team. We have received your request and a support ticket has been created for you. Our team is currently reviewing your issue and will get back to you as soon as possible.

Best,

Replit Support

[Replit] Re: [Technical] publish, create a database,

From: Quinn (Support) <support@replit.com>
To: Bryn <bryn.kai-hendricks@outlook.com>
Date: January 23, 2026 at 12:44 PM EST

Hi Bryn, thank you for contacting Replit Support.

To help you properly, I need more details about what's happening. You mentioned billing, technical, publishing, and database issues - can you describe specifically what problems you're encountering with each?

For example:

- What billing issue are you experiencing?
- What technical problem are you seeing?
- What's happening with publishing?
- What database error or symptom are you encountering?

Please include any error messages and what you were trying to do when these issues occurred.

Regards,
Quinn

[Replit] Re: [Technical] publish, create a database,

From: Quinn (Support) <support@replit.com>
To: Bryn <bryn.kai-hendricks@outlook.com>
Date: January 23, 2026 at 12:48 PM EST

I understand you're dealing with multiple frustrating issues - the unexpected charges over the last few days and the problems with your app and publishing. This situation needs immediate attention from a teammate who can investigate both the billing charges and the technical issues together.

We don't have phone support, but I'm connecting you with a teammate right now who will review your account, investigate the charges, and help resolve the technical issues with your app. We're experiencing high demand so the teammate might take some time to get back to you, but they'll have full access to investigate what happened and work on a resolution.

Regards,
Quinn

That's totally not acceptable. I'm not typing all this out, so if someone isn't going to help me now, I've got a screenshot of the app where it admits the mistake is on your end, and I'm going to get a chargeback from my credit card company for the several hundred dollars I just spent with you and stop using your service.

[Replit] Re: [Technical] publish, create a database,

From: Shivam (Support) <support@replit.com>
To: Bryn <bryn.kai-hendricks@outlook.com>
Date: January 30, 2026 at 3:09 AM EST

Hello Bryn,

Thank you for contacting Replit Support.

In order for us to investigate the issue, please send a "Private Join link" to invite us to collaborate on your Repl in Multiplayer.

If the invite option is not available and you are using a Teams account, please share the application URL instead.

Kind regards,
Shivam
Replit Support Engineer

To: Bryn <bryn.kai-hendricks@outlook.com>
Subject: [Replit] Re: [Technical] publish, create a database,

I understand you're dealing with multiple frustrating issues - the unexpected charges over the last few days and the problems with your app and publishing. This situation needs immediate attention from a teammate who can investigate both the billing charges and the technical issues together.

We don't have phone support, but I'm connecting you with a teammate right now who will review your account, investigate the charges, and help resolve the technical issues with your app. We're experiencing high demand so the teammate might take some time to get back to you, but they'll have full access to investigate what happened and work on a resolution.

Regards,
Quinn

Subject: [Replit] Re: [Technical] publish, create a database,

Hi Bryn, thank you for contacting Replit Support.

To help you properly, I need more details about what's happening. You mentioned billing, technical, publishing, and database issues - can you describe specifically what problems you're encountering with each?

For example:

- What billing issue are you experiencing?
- What technical problem are you seeing?
- What's happening with publishing?
- What database error or symptom are you encountering?

Please include any error messages and what you were trying to do when these issues occurred.

Regards,
Quinn

[Replit] Re: [Technical] publish, create a database,

From: Shivam (Support) <support@replit.com>
To: Bryn <bryn.kai-hendricks@outlook.com>
Date: February 1, 2026 at 2:42 AM EST

Hello,

Thank you for your response.

I understand how frustrating this situation has been, and I appreciate you sharing the details. I will address each point below to help move this forward.

Regarding the high and unexpected usage-based billing charges, to gain better control over Agent activity and associated costs, I recommend using low autonomy mode. This limits the Agent's actions and helps prevent unexpected usage and charges going forward.

For the application publishing concern, I can confirm that the app was successfully published at 2026-02-01T01:45:26Z. If you are still seeing issues or have specific questions related to the published app, please let me know the exact behavior you are encountering.

For the database configuration issues, kindly share a brief summary of the problem, clear steps to reproduce the issue, and any relevant screenshots. This will allow us to investigate accurately and escalate if needed.

Regarding the support account access problems, please provide a screenshot of the full error message, including the complete screen and visible URL, so we can review what is blocking access.

We take your concerns seriously and want to resolve this as quickly as possible. Once we have the requested details, we can proceed with deeper investigation and next steps.

Regarding agent:

We offer one of the most advanced AI Agents to help with coding, debugging, and project development. However, it's important to understand that the Agent is powered by large language models (LLMs), which generate code based on patterns and input—not deep understanding.

Because of this, results may vary based on your prompts, project complexity, and other context. The Agent may generate useful code, but it's not guaranteed to be correct and always requires human review and testing.

We're continuously improving the experience, but we encourage using the Agent as a collaborative tool—not a replacement for developer insight. Clear prompts, iterative review, and careful testing are key to getting the best results.

Let us know if you'd like tips on improving prompt quality or working more effectively with the Agent.

Kind regards,
Shivam

[Replit] Re: AI Agent asking questions

From: Quinn (Support) <support@replit.com>
To: Bryn <bryn.kai-hendricks@outlook.com>
Date: February 3, 2026 at 6:04 PM EST

Hi Bryn!

Thank you for your feature request regarding highlighting AI Agent questions in yellow. The team really appreciates feedback like this from our users as it helps us understand what would make Replit better for you. I'll make sure your suggestion is noted.

If you have any other questions, please let me know.

Regards,
Quinn

This email is a service from Replit. Delivered by Zendesk

On February 3, 2026 at 11:03:23 /PM UTC, Bryn bryn.kai-hendricks@outlook.com wrote:

Hello,

Please change the colour of the text from the AI agent when they have a question to yellow. There is a lot of text that comes back in a response from the agent all at once, and if you aren't expecting a question if something seems simple, it is easy to miss the questions from the agent.

Making questions stand out in yellow would save everyone time, and help ensure things don't get missed.

This issue is something that should have been worked out before going to market. The TLDR walls of text is not a new issue.

Bryn

Anything that requires a response should be in a different colour than the quick walls of text that come back when a whole bunch of actions are completed at the same time and then followed by a question or prompt.

[Replit] Re: [Technical] publish, create a database,

From: Eren (Support) <support@replit.com>
To: Bryn <bryn.kai-hendricks@outlook.com>
Date: February 6, 2026 at 1:21 AM EST

Hi Bryn,

Thank you for reaching out, and I truly understand how frustrating this experience must have been — especially with the Agent getting stuck and not producing the expected results. I want to assure you that we take this feedback seriously and will review the behavior you've described to identify what went wrong.

Please note that the Replit Agent works best with clear and specific prompts. When the input is broad or unclear (for example, "start building" or "fix this"), the Agent may attempt larger, complex operations, which can cause delays or extended runtimes. This can also increase usage charges since billing is based on the actual compute resources consumed by the Agent's activity.

That said, even though this isn't a case of an incorrect charge, we genuinely value you as a user and want to acknowledge the frustration you've experienced — particularly given the timing of the Agent v3 launch and the default autonomy setting. As a one-time exception, I can add \$30 in Replit credits to your account. This is the best we can do at this stage, but I hope it helps you continue building smoothly while keeping costs manageable.

Thank you for your patience and understanding.

Warm regards,
Eren

On February 2, 2026 at 7:37:16 /AM UTC, Bryn bryn.kai-hendricks@outlook.com wrote:

So we need to have a conversation around the insane amount of charges. The AI tools used to create my calendar were helpful at times but repeated many problems. The agent assured me it kept a record of the issues so that we can address the billing issues and as it took a very long time to hear from anyone, I continued with my project and repeatedly checked in with the agent to confirm that there would be a record.

The agent informed me to obtain a conversation history which is available through support so please send me an entire history from the time I opened my account.

Then please provide me with the necessary details on how to address the billing issues.

I opened up the link you requested but I am not sure what the point of that was. Is someone going to connect with me on there?

At this point I dispute the vast majority of the charges because I spent excessive amounts of time dealing with the AI issues of your company. This product is not ready for market and I have no doubt it learned a great deal from me as I took the time to train it. You are welcome to pay me for that service but I'm not paying you for it.

In fact, see the screenshot attached. This is just one of literally hundreds of examples so once you send me the entire conversation history with your AI agent, I will be happy to show you ALL of the rest of the examples. Alternatively we can come to an arrangement on billing but this is a personal calendar app I created for myself

only for school, so the charges and as you can see from the screenshot attached, I spent 8-10 hours with your AI repeating the same problem, only for your AI to acknowledge the next day that it had entirely went the wrong direction even though I clearly made every attempt possible to avoid it. The charges for the entirety of that were inappropriate, will not be allowed to stand.

This is just one one many, all of which are easily provable from the chat, which your AI agent said you will send me upon request. Please do, or please refund all but 7-8 hours worth of charges because that is all this should have taken even with various iterations.

I have kept screenshots of some of the conversations but I would like a copy of all them so please send or confirm how I can obtain them.

Thank you,

Bryn

[Replit] Re: [Technical] My app won't publish, it keeps getting stuck at Security Scan

From: Quinn (Support) <support@replit.com>
To: Bryn KH <bryn.kai-hendricks@outlook.com>
Date: March 17, 2026 at 3:53 PM EDT

Hi Bryn! Thank you for contacting Replit Support.

The security scan usually completes in minutes, but can take longer for large codebases or projects with many dependencies. To help troubleshoot this, I need a bit more information:

1. How long has it been stuck? (e.g., a few minutes, 30+ minutes, hours)
2. Can you share a screenshot of what you're seeing when it gets stuck at the Security Scan step?
3. Are you seeing any error messages, or is it just showing a loading/scanning indicator?
4. Is the security scan required, or do you see an option to skip it?

Once I see what you're experiencing, I can provide more specific guidance on how to proceed.

Regards,
Quinn

From: Quinn (Support) <support@replit.com>
To: Bryn KH <bryn.kai-hendricks@outlook.com>
Date: March 17, 2026 at 3:57 PM EDT

That's frustrating — 3 hours is way too long for a security scan.

Try canceling the current publish attempt and starting fresh:

1. Click Cancel on the publishing flow
2. Wait a moment, then click Publish again

If it gets stuck again, I'll need your app URL and a Private Join Link (click 'Invite' ! enable 'Private Join Link') to investigate this on our end.

Regards,
Quinn

Great to hear it's publishing now! The security scan getting stuck for 3 hours isn't normal behavior. This appears to have been a temporary issue that resolved after multiple retry attempts. Security scans typically complete within minutes, so the extended delay you experienced was unusual. Since it's working now after the retries, it was likely a transient issue with the scanning process. If you run into this again, the cancel-and-retry approach you used is the right troubleshooting step. Let me know if you need anything else!

I understand your frustration - a security scan taking 3+ hours with 13 failed attempts is definitely not normal. Security scans typically complete in minutes.

To investigate what's causing this, I need your app URL and a Private Join Link:

1. Copy your app URL from the browser address bar
2. Click 'Invite' in your project !' enable 'Private Join Link' !' share the link

Once I have these, I can look into this issue and escalate to our team for investigation.

Regards,
Quinn

Thank you for providing the app URL and join link - this allows our team to access your project and investigate the issue directly.

I'm connecting you with a teammate who can look into why the security scan keeps getting stuck and help get your app published.

Thank you for reaching out. Our team is currently experiencing higher-than-usual demand, so responses may take a little longer. Rest assured, a teammate will follow up with you as soon as possible.

Subject: [Replit] Re: [Technical] My app won't publish, it keeps getting stuck at Security Scan

Great to hear it's publishing now! The security scan getting stuck for 3 hours isn't normal behavior. This appears to have been a temporary issue that resolved after multiple retry attempts. Security scans typically complete within minutes, so the extended delay you experienced was unusual. Since it's working now after the retries, it was likely a transient issue with the scanning process. If you run into this again, the cancel-and-retry approach you used is the right troubleshooting step. Let me know if you need anything else!

Regards,
Quinn

Thank you for providing the app URL and join link - this allows our team to access your project and investigate the issue directly.

I'm connecting you with a teammate who can look into why the security scan keeps getting stuck and help get your app published.

Thank you for reaching out. Our team is currently experiencing higher-than-usual demand, so responses may take a little longer. Rest assured, a teammate will follow up with you as soon as possible.

Subject: [Replit] Re: [Technical] My app won't publish, it keeps getting stuck at Security Scan

I understand your frustration - a security scan taking 3+ hours with 13 failed attempts is definitely not normal. Security scans typically complete in minutes.

To investigate what's causing this, I need your app URL and a Private Join Link:

1. Copy your app URL from the browser address bar
2. Click 'Invite' in your project !' enable 'Private Join Link' !' share the link

Once I have these, I can look into this issue and escalate to our team for investigation.

Regards,
Quinn

Hello,

Thanks for reaching out!

In order for us to investigate the issue, would you please provide additional context?

- Any screenshots or screen recordings that capture the issue or the error.
- Steps you've already taken to try and resolve the problem (i.e., tried a different browser/device/network, cleared browser cache or tried Chrome Incognito mode, etc.).
- Please send a join link to invite us to collaborate on your Repl in Multiplayer.

The more details you provide, the better we can assist. We look forward to hearing from you.

Kind regards,

Deval

Hi Bryn!

I understand you're dealing with account restrictions despite making a payment. I can confirm your payment of \$70.13 was successfully processed at March 19, 2026 7:51 PM UTC (payment intent: pi_3TCmbWJAmnYVOvn1y0R9hM0). Your account restrictions should have been lifted, so I'm transferring this to our billing team who can investigate and restore your access right away.

Thanks. Not sure what that was about?

I asked before, how do I speak with someone senior, like on the phone or by direct email? To address platform and billing issues now that I am almost done my project.

I previously inquired about what to do about the issues I was having with the platform and billing and I sent you a few screenshots of what the agent said I'm supposed to do because I wasn't able to speak with a live person about the problems I've been having. In the screenshots, the agent said not to worry because I could request a copy of my entire conversation with the agent and then go through any issues that customer support needs to fix.

So I inquired about receiving the conversation history multiple times but haven't heard back from anyone, I'm almost done now so I need to receive a copy of it and then I can get back to whoever I'm supposed to speak with about the issues.

Thanks

Billing Dispute – Excessive AI Usage Due to System Malfunction

From: bryn.kai-hendricks@outlook.com <bryn.kai-hendricks@outlook.com>

To:

Date: March 28, 2026 at 8:07 AM EDT

Hello,

I am requesting a review and refund of recent charges on my account.

Details:

- Account: Bryn.kai-hendricks@outlook.com
- Dates of charges: January to March 2026
- Amount: Undetermined

Issue:

During this period, the AI Agent repeatedly generated faulty outputs and entered loops that consumed billable usage without producing usable results. This led to excessive and unintended charges.

Specifically:

- The system repeatedly couldn't remember what it had just completed moments earlier and required me to start all over again on hours worth of work.
- It failed to complete valid tasks despite multiple attempts.
- Usage increased significantly without meaningful output.
- Agent told me to obtain a copy of my chat logs from Replit and I could review everything with Replit when I'm done.
- I have kept screenshots where the agent acknowledges it engaged in wasteful and expensive processes that were unnecessary and/or incorrect.

This appears to be a malfunction or failure in the service rather than normal usage.

Given this, I am requesting:

- A refund or credit for the affected charges
- The provision of usage/agent chat logs from first day of account opening for review for anomalies. Replit being the only reviewer is not an acceptable outcome.

Please let me know if you need additional documentation information from me as I am not finished my project and am connecting with you as discussed.

Thank you.

Billing Dispute – Excessive AI Usage Due to System Malfunction

From: bryn.kai-hendricks@outlook.com <bryn.kai-hendricks@outlook.com>

To: Support <support@replit.com>

Date: March 28, 2026 at 8:25 AM EDT

Hello,

I am requesting a review and refund of recent charges on my account.

Details:

- Account: Bryn.kai-hendricks@outlook.com
- Dates of charges: January to March 2026
- Amount: To be confirmed (pending log review)

Issue:

During this period, the AI Agent repeatedly generated faulty outputs and entered loops that consumed billable usage without producing usable results. This resulted in excessive and unintended charges that do not reflect normal or reasonably foreseeable usage.

Specifically:

- The system repeatedly re-ran completed steps, causing duplicate billable usage
- It failed to complete valid tasks despite multiple attempts
- Usage increased significantly without meaningful or usable output
- Sessions produced extended processing time with no substantive results
- There were no clear warnings prior to significant increases in billable usage
- The agent demonstrated inconsistent state tracking (e.g., failing to retain prior steps)
- I have screenshots where the system acknowledges inefficient or unnecessary processes

Additionally, I was advised by a Replit agent that usage logs would be available for review, and I have retained supporting documentation for reconciliation.

Given this, I am requesting:

- Full access to my usage and agent interaction logs for independent review
- A refund or credit for charges associated with the above behavior

This situation appears to reflect a failure in the service rather than intentional or normal usage.

Please let me know what additional information you require. I can provide screenshots and supporting

documentation upon request.

I would appreciate a response by March 30, 2026. If we are unable to resolve this, I will pursue a billing dispute through my payment provider.

Thank you,
Bryn Kai-Hendricks

[Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

From: Quinn (Support) <support@replit.com>
To: Bryn KH <Bryn.kai-hendricks@outlook.com>
Date: April 11, 2026 at 2:01 PM EDT

Hi Bryn!

That's a lot to deal with, especially when you're seeing Agent acknowledge it ignored your instructions and created redundant work. Since you're reporting that Agent entered loops and ignored clear instructions without producing the work you requested, this requires a teammate to review the logs to verify what occurred and determine the appropriate resolution.

I'm connecting you with a teammate who can investigate the specific timestamps, review your account charges, and discuss all available options with you.

Regards,
Quinn

This is not about outcomes. This is about your agent doing things that I explicitly told it not to. If your position is that you are not going to address these matters, after your AI agent already told me you would provide me the logs so I could point out the errors (which I also have a screenshot of), then I will have to take the entirety of my charges as a chargeback as you are unable to demonstrate to me that I have approved these charges. Your terms and conditions can say whatever they want, the reality is I specifically instructed the agent not to do things that it did anyway, and that is a failure of service and my credit card company will not support that. I have already personally verified the policy on failure to deliver services and while there is a grey area there, it is up to the merchant to demonstrate against my claim that you are permitted to charge me. When I reached out to your customer service I received an email back that said you all are extremely busy and you didn't know when someone would get back to me, and your agent said that customer service could send me the logs so I could address the billing concerns.

So I look forward to receiving the logs from day one. I will just reiterate,

Subject: [Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

Hello,

Thank you for contacting Replit support.

I'm checking your account and I understand your frustration about the Agent's performance; however, Our Agent is built on LLMs, which are powerful statistical models trained on vast datasets of natural language and code. While they are capable of remarkable feats—like writing entire functions, assisting with debugging, or generating architectural suggestions—they do not "understand" code in the way a human does. Their outputs are generated probabilistically based on input prompts, context, and learned patterns.

This means the Agent:

- Does not guarantee correctness in the code it generates.
- May produce different results for the same prompt at different times.
- Cannot reason about project-specific goals, business logic, or edge cases unless explicitly told to do so.

Why We Can't Guarantee Outcomes

Because of the inherent nature of LLMs, several factors influence the quality and accuracy of the Agent's outputs:

- Prompt Quality: The Agent relies entirely on the instructions and context provided by the user. Vague or incomplete prompts often lead to incorrect or suboptimal results.
- Project Complexity: Complex software projects often involve dependencies, nuanced logic, and architecture-specific constraints that the Agent may not fully comprehend from limited context.
- Debugging & Supervision: The Agent still requires human oversight. It's up to the user to review, test, and iterate on the code suggestions provided.
- Randomness: LLMs are non-deterministic by design—meaning the same prompt can lead to slightly different outputs depending on internal randomness and current context.

Unfortunately, we cannot provide refunds for charges based on Agent usage, as these are charges for actual service consumption. However, I've issued a \$200 credit as a good will gesture. This is a one-time courtesy as I understand that dealing with the Agent can be challenging at times.

To check and monitor your usage and costs, you can visit <https://replit.com/usage> and click on the "See previous invoices" option.

If you have any other questions, please don't hesitate to contact us.

Hello,

Thank you for your response.

However, your explanation of how LLMs function does not address the core issue of this dispute.

This is not a complaint about imperfect outputs or general limitations. The issue is that the system repeatedly failed to follow explicit instructions, acknowledged those failures, and generated duplicated work cycles that resulted in additional charges.

To be clear:

- The Agent explicitly stated it ignored instructions
- It caused repeated, unnecessary iterations of the same task
- These repeated cycles directly increased billable usage
- The resulting work was not usable without redoing it

This constitutes defective service behavior, not expected variability.

Being probabilistic does not justify a system:

- Ignoring clear constraints
- Repeating the same failed actions
- Continuing to generate billable usage from those failures

This happened on multiple occasions and requires a thorough audit to rectify.

Your response does not address whether it is appropriate to charge for usage that was caused by acknowledged system errors.

I am requesting that this case be escalated to a billing supervisor for further review.

If this cannot be resolved, I will proceed with a formal dispute through my payment provider on the basis that the charges resulted from defective and non-functional service behavior.

Please confirm escalation.

Kind regards,

Bryn Kai-Hendricks

Why won't my Replit load?Đ

[Replit] Re: [Technical] Anything

From: Quinn (Support) <support@replit.com>
To: Bryn KH <Bryn.kai-hendricks@outlook.com>
Date: April 13, 2026 at 9:42 PM EDT

Hi Bryn!

I understand this is time-sensitive. Replit may not load on your device for a variety of reasons. We are no longer experiencing an active incident and no other users are reporting an issue.

First, try logging out and clearing your cookies and browser cache.

If that doesn't work, try using a different browser, device, or network (like a free WiFi, mobile hotspot, or data).

That will help narrow it down if your ISP or other technology may be blocking Replit's web requests.

If you are using company-managed or school-managed technology, please also contact your IT department to allowlist the following in their firewall, VPN, anti-virus, or other security devices:

- *.replit.com (primary domain)
- *.repl.dev (where web applications built on Replit are hosted)
- *.replit.app (default Replit URL for deployed applications)
- *.repl.co (old domain - previously used for where web applications built on Replit are hosted)
- .cdn.replit.com

Since this issue is more on the IT side, any IT resources you may have access to can assist in general as they know your environment best.

To help me investigate further, could you also let me know:

- What specifically won't load? (The Replit website, a specific project, your workspace?)
- What do you see when you try to access Replit? (Error message, blank screen, etc.)
- What browser and device are you using?

Regards,
Quinn

[Replit] Re: [Technical] transfer domain

From: Quinn (Support) <support@replit.com>
To: Bryn KH <Bryn.kai-hendricks@outlook.com>
Date: April 15, 2026 at 3:07 PM EDT

Hi Bryn!

Thank you for contacting Replit Support. I'm connecting you with a teammate who can help you with the EPP/auth code and transfer lock removal for your domain uni-cal.app.

Thank you for reaching out. Our team is currently experiencing higher-than-usual demand, so responses may take a little longer. Rest assured, a teammate will follow up with you as soon as possible.

Regards,
Quinn

[Replit] Re: [Technical] transfer domain

From: Alan Support Team (Support) <support@replit.com>
To: Bryn KH <Bryn.kai-hendricks@outlook.com>
Date: April 15, 2026 at 3:30 PM EDT

Hi,
Thank you for your request.

The domain has been unlocked, and here is the authorization (EPP) code:
Domain: uni-cal.app
Auth Code: *6~P8*k0%z5

Important: Please keep this code secure. Anyone with access to it can initiate a domain transfer.

Next steps:

- Provide the authorization code to your new registrar.
- Enter the code when prompted to start the transfer.
- The transfer typically takes 5–7 days to complete.

Let me know if you need any further assistance during the process.

Regards,
Alan

Re: [Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

From: Bryn Kai-Hendricks <Bryn.kai-hendricks@outlook.com>
To: Bryn Kai-Hendricks <Bryn.kai-hendricks@outlook.com>
Cc: Support <support@replit.com>
Date: April 18, 2026 at 1:02 PM EDT

Hi Jay,

I've now finished my exams, so I can devote my time to this. Kindly send me a copy of all logs from the time I've opened my account.

I'm attaching a cooy of a recent conversation with the agent, which acknowledges some very problematic things that I have been explaining to Replit. This example is a really clear example and it speaks to a broader issue that can't be resolved with credits.

Kindly send me the logs and I will begin to go through them so we can have a discussion about the technical glitches that have occurred and run counter to the idea of building turning ideas into apps in minutes.

Just to be clear, there are many charges I don't dispute, Replit is an amazing app when it works, it's astounding. When it doesn't work though, the results are extensively unreasonable from a consumer perspective. I accept that there is iteration, and an element of learning that the agent has to do with people who don't have coding experience and that there is a cost to the consumer in there somewhere, but I don't think many people would find, even the one example attached, as anything near reasonable and I have experienced numerous of these.

I think the first step is to try to address this directly with you, before going to the bank, which I gather has been successful for other customers who have had disputes over billing. But I'm willing to go through the extensively logs to explain my case first so hopefully we can avoid that route. Please let me know or send them to this email when you have a moment.

Thank you,

Bryn Kai-Hendricks

Subject: [Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

Hello,

Thank you for contacting Replit support.

I'm checking your account and I understand your frustration about the Agent's performance; however, Our Agent is built on LLMs, which are powerful statistical models trained on vast datasets of natural language and code. While they are capable of remarkable feats—like writing entire functions, assisting with debugging, or generating architectural suggestions—they do not "understand" code in the way a human does. Their outputs are generated probabilistically based on input prompts, context, and learned patterns.

This means the Agent:

- Does not guarantee correctness in the code it generates.
- May produce different results for the same prompt at different times.
- Cannot reason about project-specific goals, business logic, or edge cases unless explicitly told to do so.

Why We Can't Guarantee Outcomes

Because of the inherent nature of LLMs, several factors influence the quality and accuracy of the Agent's outputs:

- Prompt Quality: The Agent relies entirely on the instructions and context provided by the user. Vague or incomplete prompts often lead to incorrect or suboptimal results.
- Project Complexity: Complex software projects often involve dependencies, nuanced logic, and architecture-specific constraints that the Agent may not fully comprehend from limited context.
- Debugging & Supervision: The Agent still requires human oversight. It's up to the user to review, test, and iterate on the code suggestions provided.
- Randomness: LLMs are non-deterministic by design—meaning the same prompt can lead to slightly different outputs depending on internal randomness and current context.

Unfortunately, we cannot provide refunds for charges based on Agent usage, as these are charges for actual service consumption. However, I've issued a \$200 credit as a good will gesture. This is a one-time courtesy as I understand that dealing with the Agent can be challenging at times.

To check and monitor your usage and costs, you can visit <https://replit.com/usage> and click on the "See previous invoices" option.

If you have any other questions, please don't hesitate to contact us.

Regards,
Jay

Subject: [Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

Hi Bryn!

That's a lot to deal with, especially when you're seeing Agent acknowledge it ignored your instructions and created redundant work. Since you're reporting that Agent entered loops and ignored clear instructions without producing the work you requested, this requires a teammate to review the logs to verify what occurred and determine the appropriate resolution.

I'm connecting you with a teammate who can investigate the specific timestamps, review your account charges, and discuss all available options with you.

Regards,

Quinn

Subject: [Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

Hi Bryn!

That's a lot to deal with, especially when you're seeing Agent acknowledge it ignored your instructions and created redundant work. Since you're reporting that Agent entered loops and ignored clear instructions without producing the work you requested, this requires a teammate to review the logs to verify what occurred and determine the appropriate resolution.

I'm connecting you with a teammate who can investigate the specific timestamps, review your account charges, and discuss all available options with you.

Regards,

Quinn

Cc: Support <support@replit.com>
Date: April 18, 2026 at 1:05 PM EDT

Hi Jay,

I've now finished my exams, so I can devote my time to this. Kindly send me a copy of all logs from the time I've opened my account.

I'm attaching a cooy of a recent conversation with the agent, which acknowledges some very problematic things that I have been explaining to Replit. This example is a really clear example and it speaks to a broader issue that can't be resolved with credits.

Kindly send me the logs and I will begin to go through them so we can have a discussion about the technical glitches that have occurred and run counter to the idea of building turning ideas into apps in minutes.

Just to be clear, there are many charges I don't dispute, Replit is an amazing app when it works, it's astounding. When it doesn't work though, the results are extensively unreasonable from a consumer perspective. I accept that there is iteration, and an element of learning that the agent has to do with people who don't have coding experience and that there is a cost to the consumer in there somewhere, but I don't think many people would find, even the one example attached, as anything near reasonable and I have experienced numerous of these.

I think the first step is to try to address this directly with you, before going to the bank, which I gather has been successful for other customers who have had disputes over billing. But I'm willing to go through the extensively logs to explain my case first so hopefully we can avoid that route. Please let me know or send them to this email when you have a moment.

Thank you,

Bryn Kai-Hendricks

Subject: [Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

Hello,

Thank you for contacting Replit support.

I'm checking your account and I understand your frustration about the Agent's performance; however, Our Agent is built on LLMs, which are powerful statistical models trained on vast datasets of natural language and code. While they are capable of remarkable feats—like writing entire functions, assisting with debugging, or generating architectural suggestions—they do not "understand" code in the way a human does. Their outputs are generated probabilistically based on input prompts, context, and learned patterns.

This means the Agent:

- Does not guarantee correctness in the code it generates.
- May produce different results for the same prompt at different times.
- Cannot reason about project-specific goals, business logic, or edge cases unless explicitly told to do so.

Why We Can't Guarantee Outcomes

Because of the inherent nature of LLMs, several factors influence the quality and accuracy of the Agent's outputs:

- Prompt Quality: The Agent relies entirely on the instructions and context provided by the user. Vague or incomplete prompts often lead to incorrect or suboptimal results.
- Project Complexity: Complex software projects often involve dependencies, nuanced logic, and architecture-specific constraints that the Agent may not fully comprehend from limited context.
- Debugging & Supervision: The Agent still requires human oversight. It's up to the user to review, test, and iterate on the code suggestions provided.
- Randomness: LLMs are non-deterministic by design—meaning the same prompt can lead to slightly different outputs depending on internal randomness and current context.

Unfortunately, we cannot provide refunds for charges based on Agent usage, as these are charges for actual service consumption. However, I've issued a \$200 credit as a good will gesture. This is a one-time courtesy as I understand that dealing with the Agent can be challenging at times.

To check and monitor your usage and costs, you can visit <https://replit.com/usage> and click on the "See previous invoices" option.

If you have any other questions, please don't hesitate to contact us.

Regards,
Jay

Re: [Replit] Re: Re: [Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

From: Bryn Kai-Hendricks <Bryn.kai-hendricks@outlook.com>
To: Support <support@replit.com>
Date: April 19, 2026 at 1:23 PM EDT

Hello,

Thank you, Quinn.

I understand that this requires internal review, but I want to clarify the urgency and scope of my request. I am formally requesting:

- A complete export of my Agent usage logs from account creation (January) to present
 - A billing review tied to those logs, specifically for sessions where the Agent entered repeated execution loops or reported task completion that had not actually occurred
- I have attached multiple examples where the Agent explicitly confirms that it:
- Reported actions such as code being “pushed” or “live” without executing them
 - Failed to verify execution before instructing further steps
 - Entered repeated work cycles based on that incorrect state
 - Acknowledged that this behavior resulted in repeated work and additional charges
 - Confirmed that this pattern occurred across multiple sessions
- This is not a question of output quality. It is a question of billing for work performed under incorrect system state conditions, where the service reported completion inaccurately and continued generating billable activity as a result.

I am open to resolving this collaboratively and fairly once I have the full logs and can review the affected sessions in detail. My goal is to distinguish between valid usage and charges that resulted from these failure conditions.

Given the extent of the issue and the amount of usage involved, I would appreciate confirmation that:

- This case has been escalated to a billing supervisor or appropriate reviewer
 - The requested logs can be provided, along with an expected timeline
- These are in addition to the issues I reported to you last week which were not resolved as I informed you I had exams this week.

If this cannot be resolved through internal review, I will need to pursue a formal dispute through my payment provider. However, I would strongly prefer to resolve this directly.

I encourage you look at the attached screenshot where the agent states on its own that it is lying.

Please confirm escalation and next steps along with a timeline. The were busier than normal” standard response

Kind regards,

Bryn Kai-Hendricks

Hello,ð

ð

I am a student at TMU with ADHD, I just completed my first year but I go year round so I start again in two weeks.ð

ð

I have had a very difficult time managing time, as people with ADHD, but I have achieved a 3.78 GPA. This hasn't come with out many exceptions being made and I struggled to find a time management app that worked for me. I tried many, Todoist, Amazing Marvin, so I decided to use Replit to create my own and I also added a book reader to it so I can listen to books in the shower.ð

ð

I don't have a lot of money but I was able to extend my credit card and now am about \$15,000 in debt just from creating this app.ð

ð

It works great though, and I am so thankful I did it but it was something I had to do as I anticipate year two and beyond to become increasingly hard and I could barely keep up as it was. I am 47 years old, Indigenous, living in Toronto.ð

ð

I am wondering if there are any scholarships that you know of that I can apply for to help cover some of these costs, living expenses if you will.ð

ð

Please let me know when you have a moment.ð

ð

Thank you,ð

ð

Bryn

Date: April 20, 2026 at 12:26 AM EDT

I'm connecting you with a teammate who can investigate the 'Agent declined due to policy violation' error for your Home View app. They'll have access to the technical logs needed to determine what's causing this and resolve it. Thank you for reaching out. Our team is currently experiencing higher-than-usual demand, so responses may take a little longer. Rest assured, a teammate will follow up with you as soon as possible.

Hi Bryn!

I understand this is frustrating. To investigate why Agent keeps declining your requests with the policy violation error, I need a Private Join Link to your Home View app.

You can create one by clicking the 'Invite' button in your app and enabling 'Private Join Link'. Once I have the link, I'll connect you with a teammate who can investigate this issue.

Regards,
Quinn

On Apr 19, 2026, at 1:23 /PM, Bryn Kai-Hendricks <bryn.kai-hendricks@outlook.com> wrote:

Hello,

Thank you, Quinn.

I understand that this requires internal review, but I want to clarify the urgency and scope of my request. I am formally requesting:

- A complete export of my Agent usage logs from account creation (January) to present
 - A billing review tied to those logs, specifically for sessions where the Agent entered repeated execution loops or reported task completion that had not actually occurred
- I have attached multiple examples where the Agent explicitly confirms that it:
- Reported actions such as code being "pushed" or "live" without executing them
 - Failed to verify execution before instructing further steps
 - Entered repeated work cycles based on that incorrect state
 - Acknowledged that this behavior resulted in repeated work and additional charges
 - Confirmed that this pattern occurred across multiple sessions

This is not a question of output quality. It is a question of billing for work performed under incorrect system state conditions, where the service reported completion inaccurately and continued generating billable activity as a result.

I am open to resolving this collaboratively and fairly once I have the full logs and can review the affected sessions

in detail. My goal is to distinguish between valid usage and charges that resulted from these failure conditions.

Given the extent of the issue and the amount of usage involved, I would appreciate confirmation that:

- This case has been escalated to a billing supervisor or appropriate reviewer

- The requested logs can be provided, along with an expected timeline

These are in addition to the issues I reported to you last week which were not resolved as I informed you I had exams this week.

If this cannot be resolved through internal review, I will need to pursue a formal dispute through my payment provider. However, I would strongly prefer to resolve this directly.

I encourage you look at the attached screenshot where the agent states on its own that it is lying.

Please confirm escalation and next steps along with a timeline. The were busier than normal" standard response

Kind regards,

Bryn Kai-Hendricks

[Replit] Re: Re: [Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

From: Eren (Support) <support@replit.com>
To: Bryn KH <Bryn.kai-hendricks@outlook.com>
Date: April 20, 2026 at 4:12 AM EDT

Hi Bryn,

We'd like to share some general guidance regarding extended Agent sessions and unexpected behavior.

When conversations with the Agent become very long or accumulate significant context, performance can sometimes degrade. In extended sessions, the model continuously references prior instructions, file changes, retries, and earlier reasoning steps. This may occasionally lead to the Agent continuing along a previous execution path or attempting to complete earlier subtasks, even after newer instructions are provided.

If this occurs, the most effective solution is to start a fresh chat session. Beginning a new chat clears accumulated conversational context and allows the Agent to operate from a clean state. Remixing a project can also help reset the working environment if needed.

For more complex or multi-stage builds, we recommend:

- Breaking work into shorter, clearly scoped sessions
- Starting a new chat after major milestones or refactors
- Avoiding very long continuous threads for multi-hour tasks
- Monitoring the "Working" state and stopping execution early if behavior diverges

While long sessions are supported, keeping context focused and segmented typically leads to more stable and predictable results. If unexpected behavior continues after restarting a session, please reach out to support with details so we can review further.

Best regards,
Eren

- Avoiding very long continuous threads for multi-hour tasks
- Monitoring the "Working" state and stopping execution early if behavior diverges

While long sessions are supported, keeping context focused and segmented typically leads to more stable and predictable results. If unexpected behavior continues after restarting a session, please reach out to support with details so we can review further.

Best regards,
Eren

[Replit] Re: Re: [Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

From: Eren (Support) <support@replit.com>
To: Bryn KH <Bryn.kai-hendricks@outlook.com>
Date: April 20, 2026 at 7:52 AM EDT

Hi Bryn,

Thank you for reaching out, and I truly understand how frustrating this experience must have been — especially with the Agent getting stuck and not producing the expected results. I want to assure you that we take this feedback seriously and will review the behavior you've described to identify what went wrong.

Please note that the Replit Agent works best with clear and specific prompts. When the input is broad or unclear (for example, "start building" or "fix this"), the Agent may attempt larger, complex operations, which can cause delays or extended runtimes. This can also increase usage charges since billing is based on the actual compute resources consumed by the Agent's activity.

However, as per our Terms of Service, usage-based charges (such as Agent usage) are non-refundable, as they reflect compute resources that have already been consumed.

That said, even though this isn't a case of an incorrect charge, we genuinely value you as a user and want to acknowledge the frustration you've experienced. As a gesture of goodwill, I can add an additional \$40 in Replit credits to your account. This is the best we can do at this stage, but I hope it helps you continue building smoothly while keeping costs manageable.

Thank you for your patience and understanding.

Warm regards,
Eren

Hi Bryn,

We'd like to share some general guidance regarding extended Agent sessions and unexpected behavior.

When conversations with the Agent become very long or accumulate significant context, performance can sometimes degrade. In extended sessions, the model continuously references prior instructions, file changes, retries, and earlier reasoning steps. This may occasionally lead to the Agent continuing along a previous execution path or attempting to complete earlier subtasks, even after newer instructions are provided.

If this occurs, the most effective solution is to start a fresh chat session. Beginning a new chat clears accumulated conversational context and allows the Agent to operate from a clean state. Remixing a project can

also help reset the working environment if needed.

For more complex or multi-stage builds, we recommend:

- Breaking work into shorter, clearly scoped sessions
- Starting a new chat after major milestones or refactors
- Avoiding very long continuous threads for multi-hour tasks
- Monitoring the “Working” state and stopping execution early if behavior diverges

While long sessions are supported, keeping context focused and segmented typically leads to more stable and predictable results. If unexpected behavior continues after restarting a session, please reach out to support with details so we can review further.

Best regards,
Eren

Date: April 20, 2026 at 8:00 AM EDT

Hi Eren, Thank you for your response, I appreciate you taking the time to look into this.

That said, I don't think this situation has been fully addressed.

You noted that the Agent likely struggled due to broad prompting and continued running complex operations.

However, from a user perspective, the issue is that the Agent became stuck and did not produce usable results, while continuing to consume billable resources.

Being charged for compute that does not result in meaningful output, especially when the system appears to be looping or failing, is not something a reasonable user would expect.

If prompt specificity directly impacts billing risk to this extent, there should be clear safeguards in place, such as:

- warnings before extended compute usage,
- the ability to cap or confirm long-running operations,
- or automatic interruption when the Agent is no longer making meaningful progress.

Without these protections, the responsibility cannot reasonably fall entirely on the user.

I appreciate the offer of \$40 in credits, but this does not resolve the underlying issue of being charged for a non-functional outcome.

I would like this case escalated for further review, as I believe a refund, in full or at least in part, is warranted given the circumstances.

I am still waiting to hear back with regards to this request a few days ago as well.

Thank you,

Bryn

Re: [Replit] Re: Re: [Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

From: Bryn Kai-Hendricks <Bryn.kai-hendricks@outlook.com>
To: Support <support@replit.com>
Date: April 20, 2026 at 8:17 AM EDT

Hello,

I just want to be clear here. When I started experiencing issues, I asked the AI agent what I'm supposed to do about it.

It told me that I can contact customer service and I asked it about the logs.

It was your agent that confirmed I would get the logs and could sort this out with customer service when I was done.

I contacted customer service about the issues I was experiencing and Quinn said you are busier than usual and someone would get back to me but they didn't know when.

When the agent confirmed again about the logs I trusted that this was the way it worked. This was my first time developing something, I saw a news blurb on CNBC about it.

I have proceeded in good faith under the idea that what your agent told me would happen; would happen. So if you are telling me that it lied about that also, that makes this things a scam.

I have more than 50 screenshots including of when the agent told me this. I'm attaching one for your review.

Please confirm how I can receive a a copy of the logs I have requested?

Thank you,

Bryn

[Replit] Re: Re: [Replit] Re: Re: [Replit] Re: [Account/Billing] [Core Member] [2.170.0] [iOS 26.4.1 iPhone 17 Pro Max] Support Request

From: Quinn (Support) <support@replit.com>
To: Bryn KH <Bryn.kai-hendricks@outlook.com>
Date: April 20, 2026 at 8:19 AM EDT

Hi Bryn,

Since you're reporting that Agent became stuck and looped without producing usable results while consuming billable resources, this requires our technical team to review the logs to verify what occurred. I'm connecting you with a teammate who can investigate the specific timestamps and determine the appropriate resolution. They'll also be able to address your other pending request.

Thank you for reaching out. Our team is currently experiencing higher-than-usual demand, so responses may take a little longer. Rest assured, a teammate will follow up with you as soon as possible.

Regards,
Quinn

Formal Notice – Consumer Protection Act (Ontario) Violation and Billing Dispute

From: Bryn Kai-Hendricks <Bryn.kai-hendricks@outlook.com>
To: Support <support@replit.com>
Date: April 20, 2026 at 8:24 PM EDT

Hello,

I am writing to formally dispute charges applied to my account and to notify you that your refusal to respond directly to the issues I have raised and the evidence I have provided does not permit you to override applicable consumer protection law in Ontario.

Under the Consumer Protection Act, 2002 (Ontario):

- It is illegal to misrepresent a service, including promising functionality that is not delivered or that the provider knows or should reasonably know cannot be delivered.
- Where a service is misrepresented, the consumer has the right to rescind the agreement within one year. I rescind any agreement that was made with Replit whereby terms and conditions prevent rectifying this matter in a manner to my agreement as yet to be defined.
- Consumers cannot be charged for services that were not properly delivered or did not function as expected. In this case, the service (Replit Agent) did not perform as represented and failed to produce usable results, yet charges were still incurred. This constitutes misrepresentation and/or failure to deliver the contracted service. Additionally, I made multiple attempts to resolve this issue directly and received no response within a reasonable timeframe.

Your lack of response speaking to the issues I have raised and request for the logs does not supersede statutory consumer rights.

As a result:

- I am initiating a charge dispute with the payment provider
- I am preparing a formal complaint with Consumer Protection Ontario

I am providing you one final opportunity to resolve this matter directly.

Please confirm within 48 hours:

- That you will provide me with a full log of all charges and agent conversation history;
- A substantive response addressing the above legal concerns

If I do not hear from you within this timeframe, I will proceed with escalation through regulatory and financial channels, and let this communication constitute my final effort to resolve this with you per the applicable legislation in Ontario and British Columbia.

Sincerely,

Bryn Kai-Hendricks
